We strive to work together as a team to collectively learn about the product design process by creating an innovative and functional prototype that represents our learnings while meeting a relevant need in today's society. Green Team holds these statements as their dogma:

Communication, Collaboration, and Teamwork
We will be accessible and communicative about our work. Since collaboration is often a key to success, we shall share information on our ideas and work openly when others are motivated to help, even if they may not have been specifically assigned to the task.

We will be contactable.

We will ask for help if we need it and will accept help if it is offered.

Decision-Making
We will respect every member's opinion and allow each member to speak their piece.

We will be level-headed in every discussion.

We will make an effort to be objective and present facts to get everyone up to speed before including our opinions and making critical team decisions.

Once a decision is made, we will support it to our fullest extent.

We will not make decisions hastily without all the necessary information. Proper practices should not be compromised for a lack of time.

Safety
We will practice the highest degree of safety at all times and comment immediately if something is out of place.

We will maintain a clean and safe work environment, including the return of team tools to their proper location before I leave the lab.

Behavior
We will take an active role in accomplishing tasks and will take ownership and responsibility for the tasks assigned to us.

We will have fun!
